

ExitSentry

by CheckVideo

The industry's #1 airport exit lane security solution.

ExitSentry® is the industry-leading monitoring system that automatically monitors people and object flow through airport exit lanes. This TSA-accepted, patented solution has logged over two million hours of proven performance in **more than 50 airports** throughout North America.

ExitSentry's **advanced video analytics** technology immediately identifies an individual attempting to enter an airport exit lane from the wrong direction. Using both audible and visual alarms, it alerts security personnel and then digitally records the incident for **instant playback**.

ExitSentry can also optionally be interfaced with containment solutions that lock doors when a potential breach is detected. When deployed in unmanned lanes, the system enables security personnel to focus on baggage and passenger screening. It can also act as a force multiplier for manned exit lanes where wide or multiple lanes can be monitored centrally.

RELIABLE PERFORMANCE

ADVANCED VIDEO ANALYTICS

Automatically detects wrong-way motion of people and objects using patented, field-configurable advanced video analytics software.

TSA TRUSTED

Complies with rigorous TSA performance standards.

UNOBTRUSIVE

High passenger throughput does not require revolving doors, vestibules or mantraps to function.

INSTANT ALERTS, INSTANT REPLAY

Provides early warning detection and event instant replay.

BUILT-IN RECORDING

Digitally records and stores alarm video with time and date stamp.

FLEXIBLE INSTALLATION

SIMPLE AND INTUITIVE

Allows for user training in under 15 minutes.

CUSTOMIZABLE

Includes user-defined pre-alarm warning zone, multi-media event logging and documentation.

TURNKEY SYSTEM

Interfaces to other systems and functions for remote alarm notification, intrusion containment, authorized remote bypass, or other functions.

NON-PROPRIETARY COMPONENTS

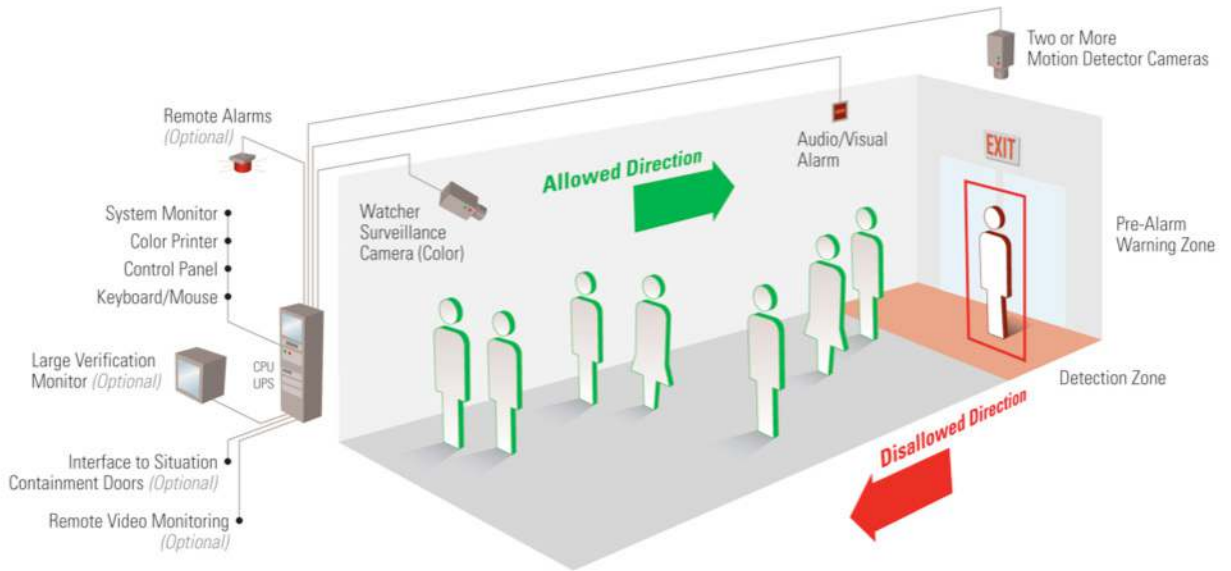

Utilizes off-the-shelf components. Built in the USA!

LOW MAINTENANCE COST

No mechanical moving parts result in high reliability and significantly lower service and maintenance costs. Reduce system downtime and lane closures for maintenance.

EXITSENTRY AIRPORT EXIT LANE MONITORING SOLUTION

ExitSentry applies advanced video analytics technology to immediately catch any individual attempting to enter an exit lane from the wrong direction.

OVER 17 YEARS OF PROVEN PERFORMANCE IN MORE THAN 50 AIRPORTS
