# See what matters.

**CheckVideo CloudVMS™ is a hosted software service with:**

- Video management functionality
- Remote configuration
- Management of CheckVideo appliances across multiple customer locations.
- Secure backup to protect your video from tampering and failures
- Powerful video search engine with instant results

**VIDEO ANALYTICS**

**UNLIMITED LOCATIONS**

**MULTIPLE USERS**

**SEARCH ENGINE**

**SECURE BACKUP**

## Reliable protection has never been this simple.

CheckVideo's revolutionary CloudVMS™ enables centralized configuration, viewing and monitoring of video feeds across tens or hundreds of locations while reducing infrastructure costs. Every video camera enrolled into the service benefits from remote live, playback and export without the need to add servers or install software. Combining the best of on-premise recording and off-site backup, your video evidence is safe.

An industry-first search engine saves hours of time on investigations, and built-in video analytics notify you about activities of interest as they occur, not after the fact. As a managed system, updates are included and automatically applied, and the health of the system is monitored to ensure that your property stays secure.

## BENEFITS

### AUTOMATIC SOFTWARE INTEGRATION
Seamlessly integrates with leading central station automation software, minimizing additional operator training.

### UNIFIED MANAGEMENT INTERFACE
Provides single-point management of all appliances, with automatic time synchronization across customer locations.

### REMOTE CONFIGURATION
Delivers point-and-click event setup via a web browser.

### IP SECURITY
Aggregates, authenticates and encrypts data from video cameras, keeping hackers out.

### SOFTWARE AS A SERVICE
Hosted software for system configuration and management that easily scales with business growth, eliminating the need for capital investment in additional local servers.

### VIDEO DASHBOARD
Enables viewing of video alarm clips, streaming live and recorded video from all cameras.

### CONFIGURATION BACKUP
Stores configuration settings on the CheckVideo appliance and the CheckVideo servers.

### AUTOMATED SOFTWARE UPDATES
Sends software updates via the web to the CheckVideo appliance.

### GOOD
Proven video analytics with 20 years in mission-critical environments are in every solution. The best SSL A-rated Cloud security keeps video safe while allowing view and search from anywhere.

### FAST
The only on-site hardware is the camera or gateway (for existing or new analog.) With Check-Video, you've now immediately upgraded to IP, and depending on the number of cameras, you can be operational in less than a day.

### COST-EFFECTIVE
CheckVideo's cloud based solutions eliminate the cost and complexity of servers and software on site. Spending money for storage, software updates or additional features? Here there's no other hardware or software needed. Ever.
