

CheckVideo Release Notes

6/27/18

User Defined Limit for Maximum Number of Recording Days (4223/4245/FW)

Under Devices>Manage Device, users may choose to limit the number of days of continuously recorded video stored on their device. Continuously recorded video will be the smaller of the number of days specified on the Manage Device page **OR** the available storage on the local device. This feature is limited to the following devices: CV154, CV168, CV137, CV4IP, CVNVR and ExpressHD. *Note: This feature does not affect the number of days of cloud event clip storage.*

DVR Retention

Enter 0 to retain as much DVR as possible or enter the maximum number of days that may be kept:

Methodology for Setting Time Improved (3449/FW)

Should a customer's router block access to the NTP time server (port 123), all devices will now get time from the CheckVideo portal on a regular basis, eliminating time drift.

Dashboard: Auto-Refresh Updated (4289/4297/4312)

- When Event Auto-Refresh is selected, the Delete and Save buttons have been removed. These functions remain available on the View All Events page.
- The Event Arrival Sound timing has been modified to limit the chime to one sound when several events arrive at one time.
- System Events are shown again when the "Show System Events" option is selected.

ExpressHD: DVR Playback (4211/FW)

Did you know that you can view the ExpressHD DVR without using the CheckVideo portal? Connect a local monitor to your ExpressHD. If you are doing this post installation, you will be required to power cycle the ExpressHD after connecting to the monitor to the recorder. Right click the camera view to display the menu which now contains DVR Playback. Once selected, you must select a date and start time to begin. Once displayed, the DVR includes a timeline which allows you to move from one date/time to another. You can also double click the image to view in full screen.
