

## See what matters

- Centralized video management functionality
- 100% web based interface
- Cameras and recorders across multiple customer locations
- Secure backup to protect your video from tampering and failures
- Powerful video search engine

### Reliable protection has never been this simple.

CheckVideo's revolutionary managed service enables centralized configuration, viewing and monitoring of video feeds across tens or hundreds of locations while reducing infrastructure costs. Every video camera enrolled into the service benefits from remote live, playback and export without the need to add servers or install software. Combining the best of on-premise recording and off-site backup, your video evidence is safe.

An industry-first search engine saves hours of time on investigations, and built-in video analytics notify you about activities of interest as they occur, not after the fact. As a managed system, updates are included and automatically applied, and the health of the system is monitored to ensure that your property stays secure.

## BENEFITS

### UNIFIED MANAGEMENT INTERFACE

Provides single-point management of all appliances, with automatic time synchronization across customer locations.

### BUILT-IN HEALTH MONITORING

Our devices monitor their own health and alert within minutes if any component, including your 3rd party cameras, have an issue.

### WEB BASED INTEGRATION

Delivers point-and-click setup via a web browser.

### IP SECURITY

Aggregates, authenticates and encrypts data from video cameras, keeping hackers out.

### SOFTWARE AS A SERVICE

Hosted software for system configuration and management that easily scales with business growth, eliminating the need for capital investment in local servers.

### VIDEO DASHBOARD

Enables viewing of video alarm, streaming live and recorded video from all cameras.

### CONFIGURATION BACKUP

Stores configuration settings on the CheckVideo appliance and the CheckVideo servers.

### AUTOMATED SOFTWARE UPDATES

Pushes software updates over the network ensuring you always have the latest features.

### GOOD

We pioneered cloud hosted video in 2009 and our service gets top grades for cybersecurity. With mission critical analytics refined over 20 years, every camera becomes a smart sensor.

### FAST

With little to no hardware required on site, plug in our smart cameras and get started with monitoring in minutes. Health checks and remote troubleshooting save you time.

### COST-EFFECTIVE

We eliminate the cost and complexity of servers and software on site. With CheckVideo cameras, there's no other hardware or software needed!
