

Release 2.3.41 Release Notes CheckVideo Customers

Introducing Contact Search

With this release, your CheckVideo 4MP IP cameras and IP Gateways now support Contact Search - a powerful set of Contact Tracing Analytics. Many of you have asked for advice and tools for Contact Tracing as you work towards reopening your offices with confidence. Contact Search can help you determine who may have been in contact with an infected individual. Having this knowledge can help you safely and swiftly reduce the spread of infection.

Contact Search helps you quickly find events where:

- People come into close contact with each other
- There are multiple people in one view

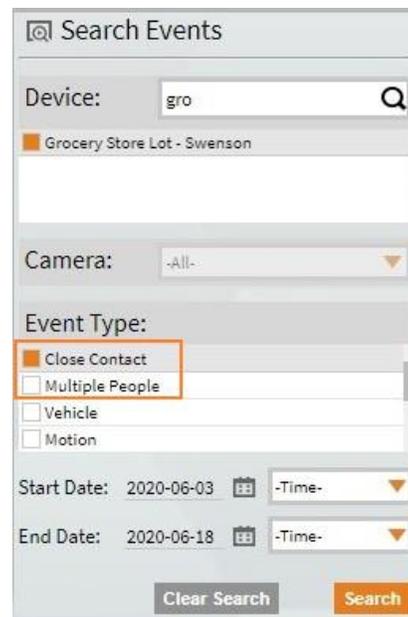

To conduct a Contact Search, login to the CheckVideo portal:

1. Click on the **History tab** on the top part of your page and select **Search Events**.

2. **Begin your search** on the right side of the Search Events page:

- Select the **devices** for your search
- Filter events by **Close Contact** or by **Multiple People**. NOTE: you cannot select both types for a single search
- Select a **date/time** range
- Hit **Search**

3. **View** your results!

Since this capability is meant for Contract Tracing efforts that are typically conducted after the fact, Contact Search Analytics will appear as Person event notifications. For more information, check out <https://www.checkvideo.com/contacttracing/>
