

AI Powered Data Center Security

Protect Assets. Verify Threats. Monitor Progress - from Anywhere.

CheckVideo delivers cloud-based video surveillance for data center environments. Intelligent alerts, AI-powered search, multi-site management, and proactive health monitoring help security teams monitor critical areas, verify activity faster, and maintain reliable video visibility across one facility or multiple locations.

CLOUD MANAGED SOLUTION - Manage cameras, users, alerts, and video access from one platform without complicated server provisioning.

INTELLIGENT VIDEO SEARCH & ALERTS- Receive notifications when people or vehicles are detected and find relevant footage without reviewing hours of video.

MONITOR MULTIPLE LOCATIONS - With the power of the cloud and video analytics, a single person can watch hundreds or even thousands of cameras over multiple data centers and support locations.

CRITICAL AREA MONITORING- Maintain live and recorded visibility from your desktop or phone across perimeters, gates, entrances, loading areas, data halls, and server aisles.

HEALTH MONITORING- Our devices monitor their own health and alert within minutes if any component, including your legacy cameras, have an issue.

- ✓ Offsite backup – no single point of failure
- ✓ AI-Powered person and vehicle detection
- ✓ Lower IT and maintenance costs
- ✓ Higher network security and availability
- ✓ Automatic software and feature updates
- ✓ Unlimited users, locations, and cameras
